

— HIGH SCHOOL SUPPLY LIST —

We are highly recommending that high school students purchase a laptop computer for school use. The use of a computer is an important tool in a student's education. We do have laptops available at the school; however, they are older and students do not have unlimited access. Students with their own computer will be able to use the school Wi-Fi (filtered) and are able to save their documents on the school server. A student computer does not need to be a high-end machine; it simply needs to be able to run Microsoft Office and search the Internet. These simple machines can be purchased for a cost of anywhere between \$200 and \$350.
